

Assembler

The successful candidate will be responsible for all prototype and production system assembly and maintenance tasks at Coulson Ice Blast.

Some of these tasks will include, but not be limited to:

- Assisting in the specification, assembly, installation and maintenance of Coulson Ice Blast equipment
- Assisting the engineering team in determining component specifications
- Assembly of prototype and production machines
- Prototype and production system setup, testing and evaluation
- Responsible for maintaining parts inventory and stock control
- Responsible for the maintenance of shop tools and tooling
- General shop tasks including shop cleaning and maintenance of work areas.
- Ensuring that shop and workplace safety protocols are maintained and followed
- Ensure that all Coulson Ice Blast safety equipment is maintained

Experience in any or all of these disciplines is a benefit:

- Prototype and production equipment development
- Assembly, installation and maintenance of refrigeration equipment
- Abrasive blast or other cleaning equipment design or use
- Pneumatic and/or hydraulic equipment assembly
- Machine assembly
- Machine testing and evaluation
- OEM equipment assembly
- Class 1 or 3 drivers license
- Truck and trailer maintenance
- Electrical generator and/or air compressor maintenance
- Safety and first aid equipment and protocols

The successful candidate must work well with a multi-disciplined design team and clients in a very dynamic environment. The ability to perform client site visits and support in a global business setting is required.

Remuneration is negotiable.
