

Machinist

The successful candidate will have a valid Red Seal machinist ticket.

They will be responsible for all prototype and component machining tasks at Coulson Ice Blast.

Some of these tasks will include, but not be limited to:

- Assisting in the specification, assembly, installation and maintenance of Coulson Ice Blast equipment
- Assisting the engineering team in determining component and CAM specifications
- Manufacturing prototype and production components
- Machining processes such as lathing, milling, and measurement, pre- and post-machining operations.
- Assisting the engineering team with component material specifications
- Assist the production team with machine assembly as required
- Responsible for the maintenance of machining tools and tooling
- General tasks typical for technicians with a valid Red Seal refrigeration certification ticket and a valid CFC refrigerant handling ticket.

Experience in any or all of these disciplines is a benefit:

- Prototype and production equipment development
- Assembly, installation and maintenance of ice making equipment
- Abrasive blast or other cleaning equipment design or use
- Pneumatic and/or hydraulic equipment
- Machine assembly
- CADD / CAM / AMS systems
- OEM equipment assembly

The successful candidate must work well with a multi-disciplined design team and clients in a very dynamic environment. The ability to perform client site visits and support in a global business setting is required.

Remuneration is negotiable.
