

Refrigeration Mechanic

The successful candidate will have a valid Red Seal refrigeration certification ticket and a valid CFC refrigerant handling ticket.

They will be responsible for all new equipment installations and maintenance of refrigeration systems at Coulson Ice Blast.

Some of these tasks will include, but not be limited to:

- Assisting in the specification, assembly, installation and maintenance of Coulson Ice Blast equipment
- Assisting in the layout, sizing and cutting of refrigeration piping and tubing
- Installation of refrigeration components including icemakers and refrigeration condensing units and associated equipment
- Brazing and soldering of refrigeration piping systems
- Refrigeration system evacuation and charging
- Responsible for refrigerant and refrigerant oil purchases as well as the safe handling, storage, charging, recovery and waste disposal of these materials
- Responsible for the maintenance of refrigeration tools and tooling
- General tasks typical for technicians with a valid Red Seal refrigeration certification ticket and a valid CFC refrigerant handling ticket.

Experience in any or all of these disciplines is a benefit:

- Low temperature and cryogenic refrigeration systems installation and maintenance
- Assembly, installation and maintenance of ice making equipment
- Abrasive blast or other cleaning equipment design or use
- Pneumatic and/or hydraulic equipment
- Machine structural assembly
- OEM equipment assembly

The successful candidate must work well with a multi-disciplined design team and clients in a very dynamic environment. The ability to perform client site visits and support in a global business setting is required.

Remuneration is negotiable.
